

DV Drip Valve

Renowned DV Valve quality
specially designed for drip

DV valve quality and performance adapted specifically for drip applications

- **Flow Rates** - Ideal for flow rates between .76 to 30 l/m
- **Unique diaphragm design** - Patented unit with dual seal diaphragm- provides better sealing and no weeping
- **Special inlet design** - prevents small particulate from prevent valve closure
- **Filtration** - Built in filtration protects pilot valve

The DV Drip low flow valves have been specially designed to work in drip applications. The DV Drip valve is ideal for installations with flow rates ranging from 0.2 to 8 gpm. The addition of a lip in the inlet causes the diaphragm to raise higher during low flow applications, allowing small dirt particles to pass through that get caught in standard valves used in these conditions, which leads to poor sealing weeping, water waste and increased maintenance calls.

Models

- LFBV-075: ¾ low flow DV drip valve

LFBV-075

How To Specify

LFBV-075

Model

LFBV: Low Flow Remote Control Diaphragm Valve

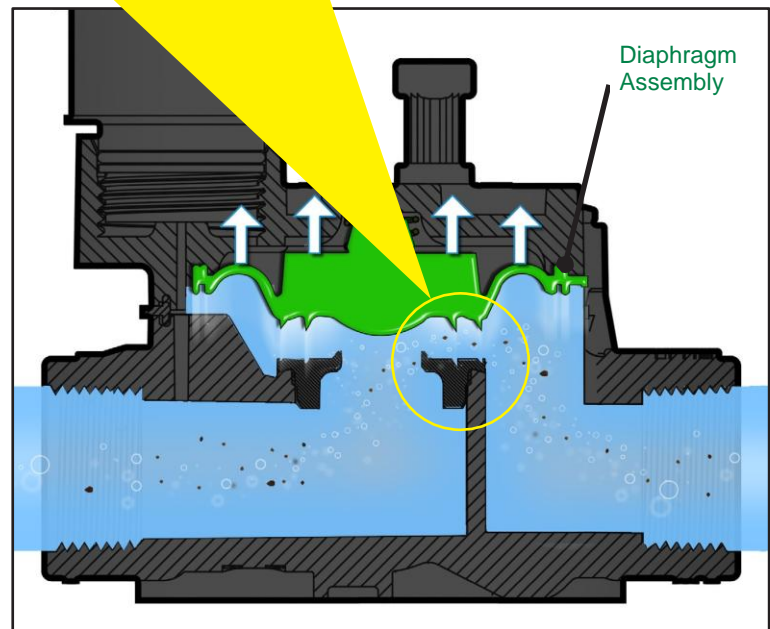

Size

075: ¾" (20/27)

Unique "double-knife" diaphragm Design

The dual seal design includes a double knife edge at the inlet in addition to the main diaphragm seal.

The specially designed lip raises the diaphragm higher in low flow operations so small particles do not get trapped under the seal, leading to weeping and or valves that will not close.
